

Beurre Blanc. is a collection of fine, small batch icewater hash, solventless concentrates, boutique flower, and edibles.

Handcrafted by an experienced and dedicated team of five legacy Hashmakers in our state-of-the-art facility.

Hands-on care, meticulous attention to detail, and a deep passion for the plant combined with advanced scientific processes.

Health Canada compliant, lab tested, OG quality formulations, that provide legacy market connoisseurs products they love with added peace of mind.

## Crème Fraîche

Fresh Pressed Live Rosin

Fresh pressed is the least processed form of live rosin available. Immediately after expression, our skilled Hashmakers homogenize the live rosin into a taffy like consistency, creating vibrant colours and ribbons of layers in it before its packaged directly into individually sealed containers.

## Brise Froide

Cold-Cure Live Rosin

We cure the live rosin in sealed containers at room temperature, aging it for over a week, fully maturing the cannabis resins as they steep in their own juices. This preserves the terpenes and accentuates the rosin's aromas and flavours. Our cold-cure has a wet batter consistency and a vibrant hue. It is packaged at peak intensity.

### Strain

Jet Fuel Gelato X Orange Cookies

### Type

Indica-Dominant Hybrid

### THC

700-820mg/g

### Terpenes

6.11%

Trans-Caryophyllene.....	2.208%
Limonene.....	1.038%
Beta-myrcene.....	0.742%
Farnesene.....	0.700%
Humelene.....	0.488%

### Aroma

Citrus, Gas

### Colour

Creamy Off-White

### Size

1g

### OCS SKU

310170\_1g

### Strain

Jet Fuel Gelato X Orange Cookies

### Type

Indica-Dominant Hybrid

### THC

650-750mg/g

### Terpenes

6.53%

Trans-Caryophyllene.....	2.374%
Limonene.....	1.114%
Beta-myrcene.....	0.779%
Farnesene.....	0.746%
Humelene.....	0.518%

### Aroma

Citrus, Gas

### Colour

Vibrant Butter

### Size

1g

# Powdered Donuts (JFG x OC)

Prepared 2 Ways

## Hand-harvested Whole Flower

Our Hashmakers hand-harvested this flower when trichome heads reached optimal maturation & clarity. This 'live' plant material was then immediately frozen to maximize monoterpene preservation which would otherwise evaporate during the typical drying process.

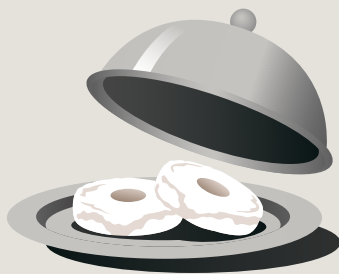

## Solventless Extraction

### Step 1 Bubble Hash Extraction

Fresh frozen flower is placed in a vessel of ice water. The water and ice are made using in an ultra-clean reverse-osmosis purification process. The flower is agitated to separate the trichome heads, where all the cannabinoids and terpenes are contained, from the plant material. This trichome rich water is poured through a series of extremely-fine mesh bags to isolate the heads which are then scooped, evenly spread on trays, and placed in freeze dryers for 24-48 hours to remove all water content. The end result is a flavourful, high potency bubble hash.

### Step 2 The Rosin Press

The live rosin process starts by placing 20 to 30 grams of bubble hash inside 25 micron pouches. These pouches are then pressed in between two steel plates at a temperature of 160°F to 200°F. This allows the essential oils trapped inside the bubble hash to ooze out while stripping away the waxy membrane of the trichome head.

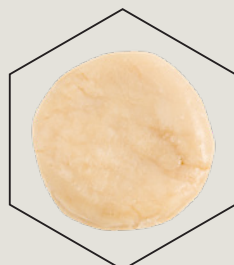

## Powdered Donuts 2-Ways

We offer you the JFG X OC cultivar prepared two ways. Each has been subjected to the same live rosin extraction process, but finished differently. One as a fresh press live rosin, and the other as cold-cure live rosin. **We encourage you to sample both side-by-side and share your experience with us via instagram at @thebeurreblanc.**

## Crème Fraîche

Fresh Pressed Live Rosin

This is the most true-to-strain, natural representation of the cultivar from which it was extracted. It is packaged directly off the rosin press. The finished product is presented in the shape of a coin. It has a similar texture to cold cheese cake so it's easy to break off the right amount to consume.

## Brise Froide

Cold-Cure Live Rosin

After press, the live rosin is stored in airtight containers at room temperature in a light deprived setting for more than a week, allowing a complex terpene profile to develop as the resins fully mature. Our cold-cure live rosin has a wet batter consistency and a vibrant hue.
